| Deskripsi Singkat                                                                                                                                                                                                                                                                                            | ▲ |
| Drilling and blasting is a controlled method of breaking rock for excavation using explosives after drilling holes. This process is common in mining, quarrying, and civil engineering projects like road and tunnel construction. The process involves creating a blast pattern, drilling holes in the rock |   |
| Pengeboran                                                                                                                                                                                                                                                                                                   | ▲ |
